

## PRODUCT BULLETIN

**Bulletin:** CRPX081420  
**Date:** 8/14/2020  
**To:** OEM Bus Builders, Sales Team and Internal Staff  
**From:** Doug Oswald, Marketing Director  
**Subject:** **ClearRide** – Powered by *PreventX™* (Antimicrobial Coating)

---

Since June 29, American Seating has been applying antimicrobial coating to all high-touch surfaces of our seating and securement solutions. On August 31 we'll be changing to a superior solution called **ClearRide** – Powered by *PreventX*. This product, like the one we've been using, is EPA-registered as a biostatic agent and provides enduring antimicrobial protection against bacteria and viruses on hard and soft surfaces. **ClearRide** has the same capabilities and more: a larger list of pathogens destroyed or inactivated, longer-lasting effects, a longer shelf life and is non-corrosive.

For reapplication or application to existing transit vehicles, American Seating is the exclusive distributor of 5-gallon containers of ready-to-use **ClearRide** – Powered by *PreventX* and is ready to order immediately. Application equipment recommendations and instructions for transit authorities are available upon request. For additional information, please see the attached sell sheet that further explains our superior **ClearRide** antimicrobial solution.
